Researchfish data

125,000 awards
2.5 million outcomes
87,000 users
100 ROs
60 funders

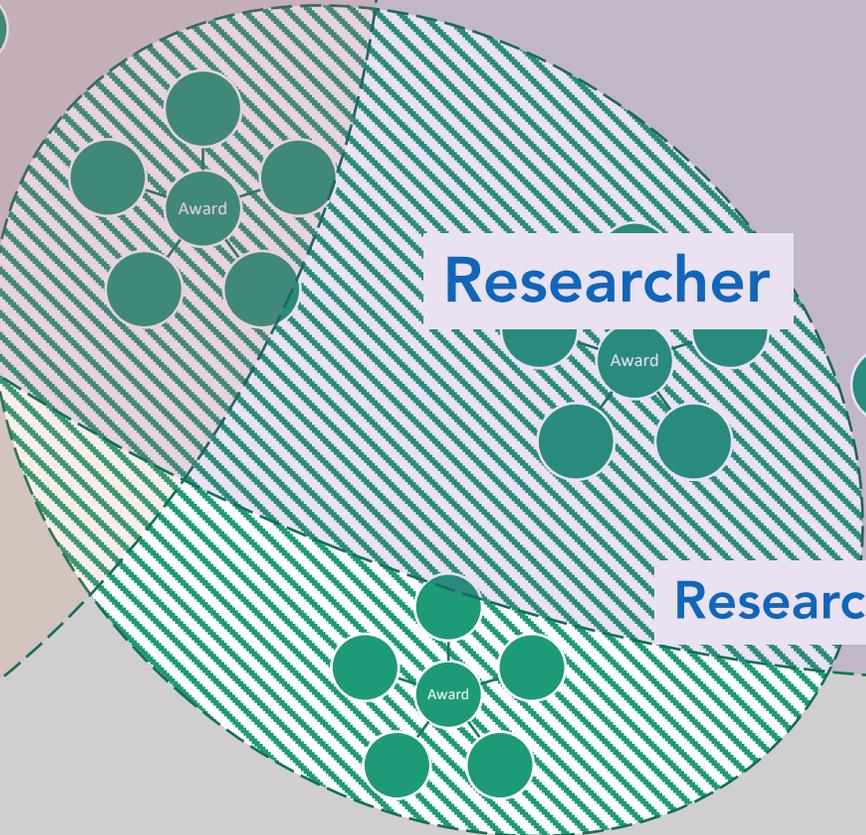

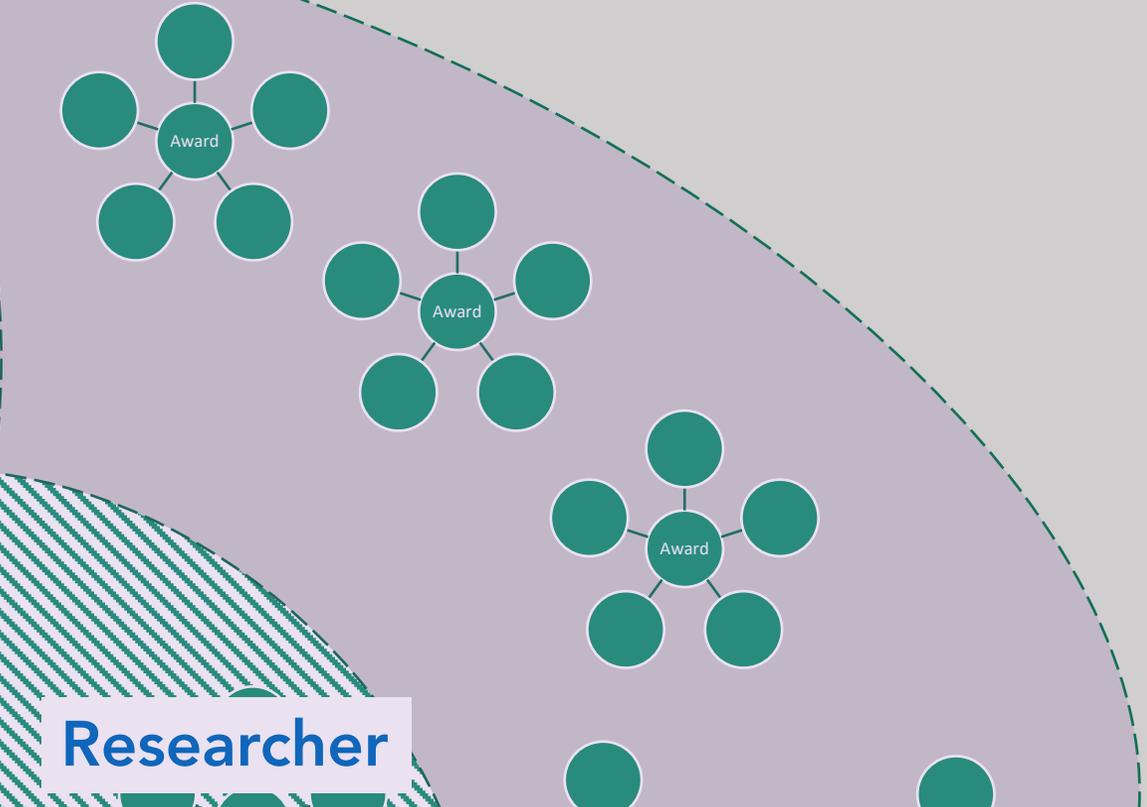

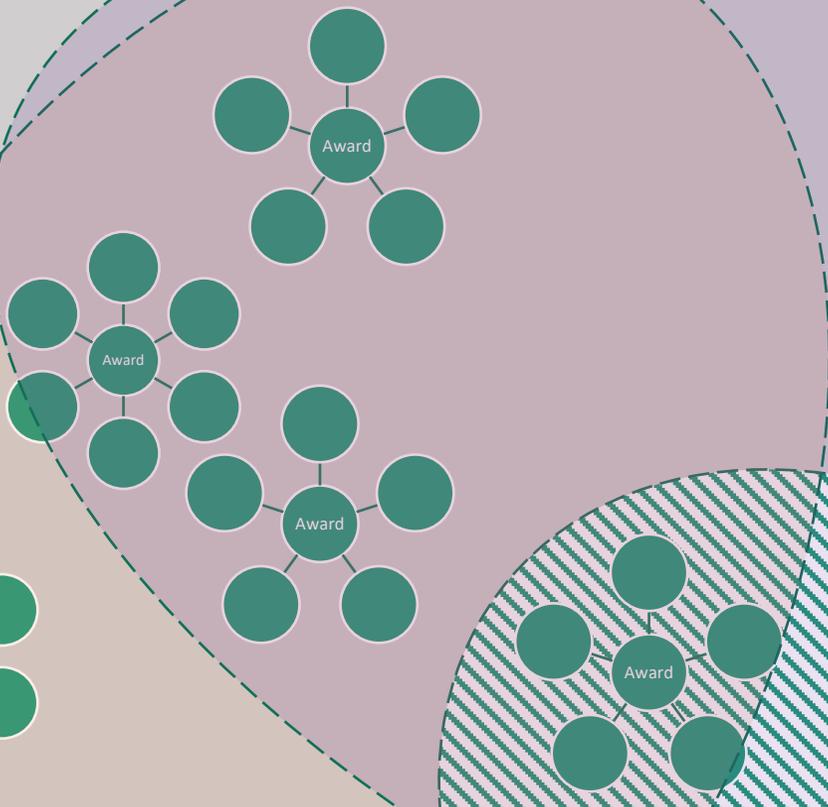

Funder

Researcher

Research Organisation

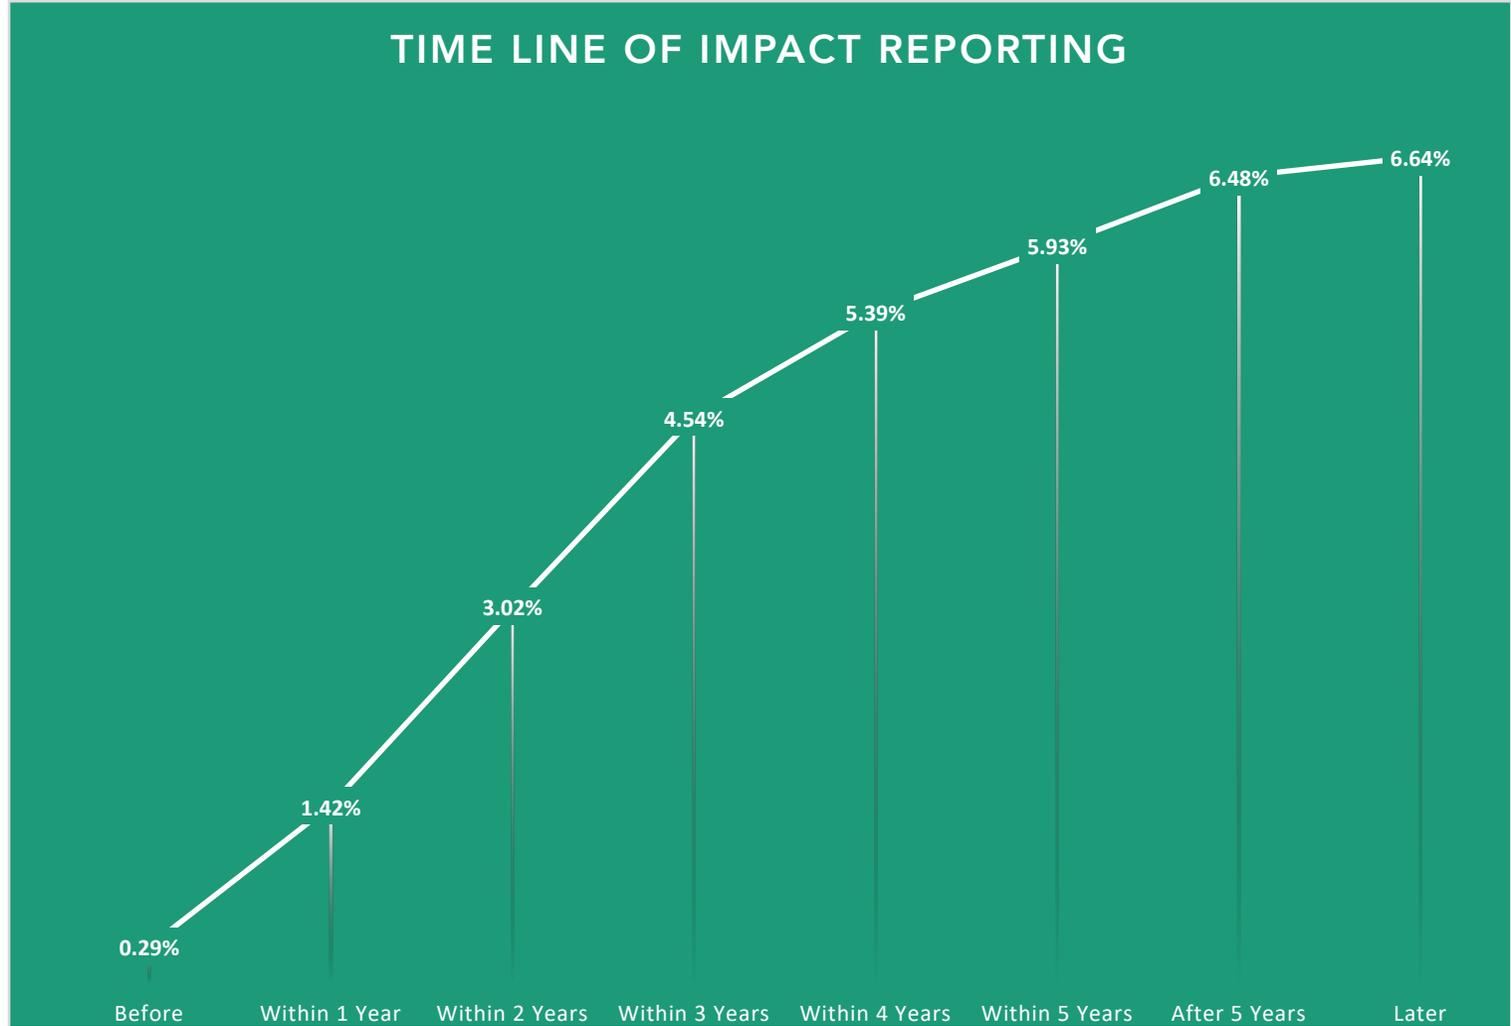

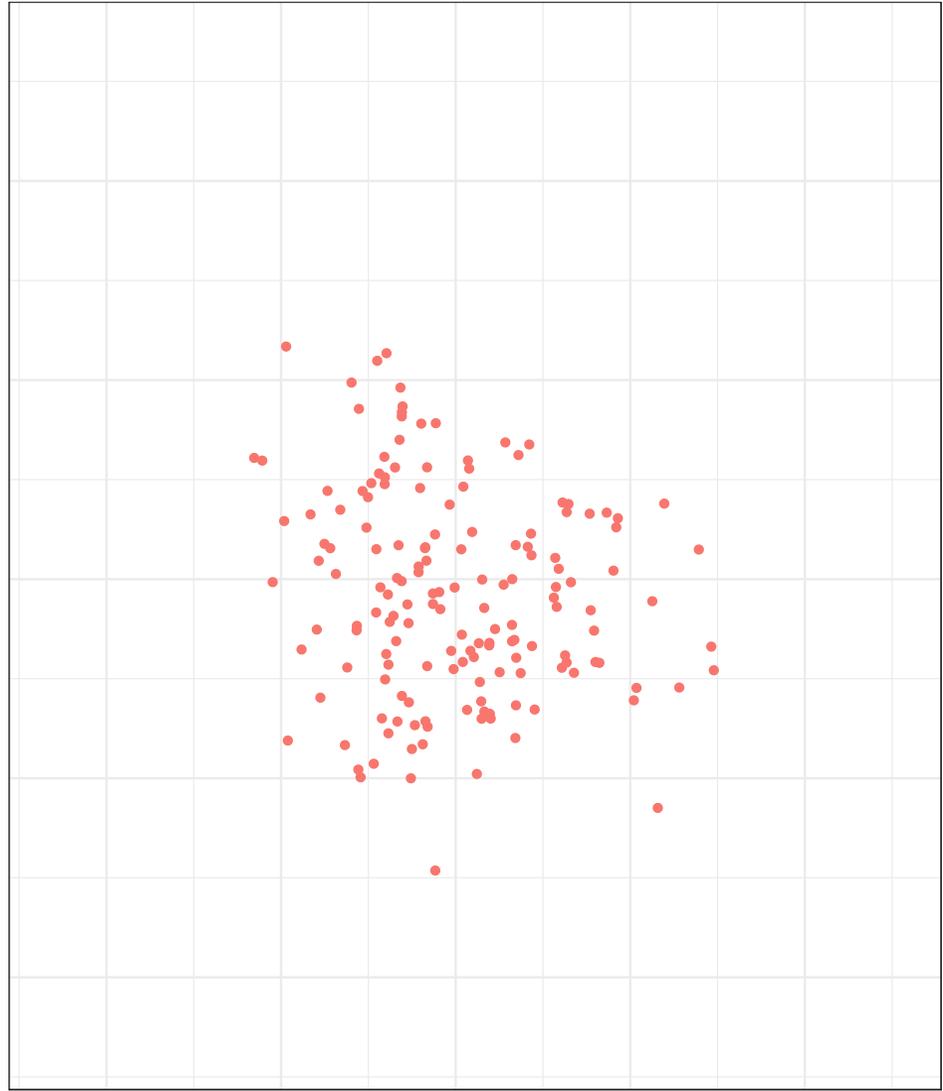

Is it hard to get social science and humanities into policy?

- How many projects report policy influences?
 - Citation by a policy report
 - Meeting with a Minister
 - Participation in a policy working group
- How long does it take them to do it?
- Do some funding structures enable researchers to increase the success in this area?
- How can we improve the funding (not necessarily increase!) to get more policy-makers to benefit from social sciences and humanities insights?

Time to impact

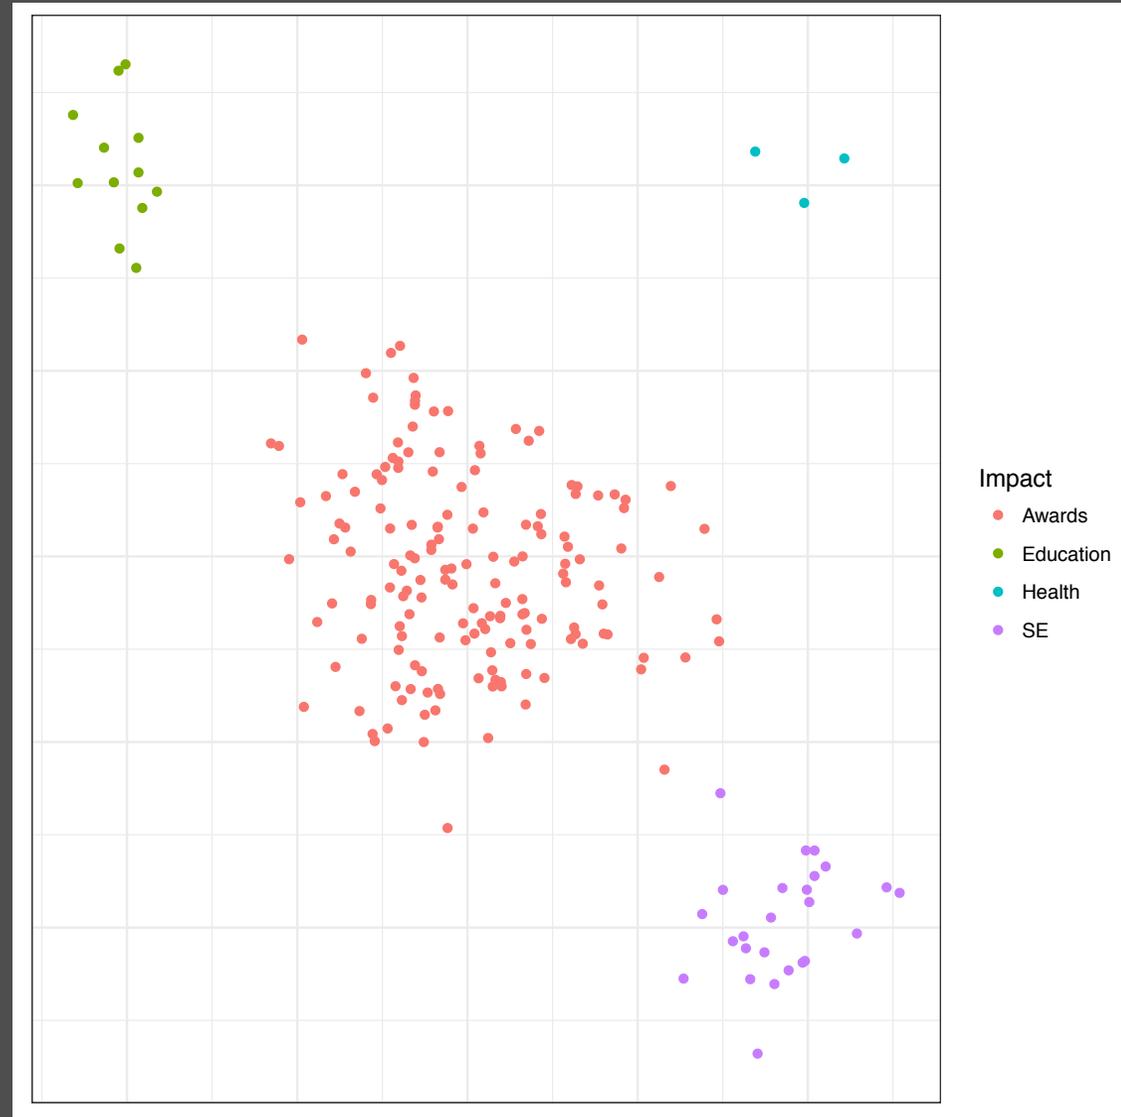

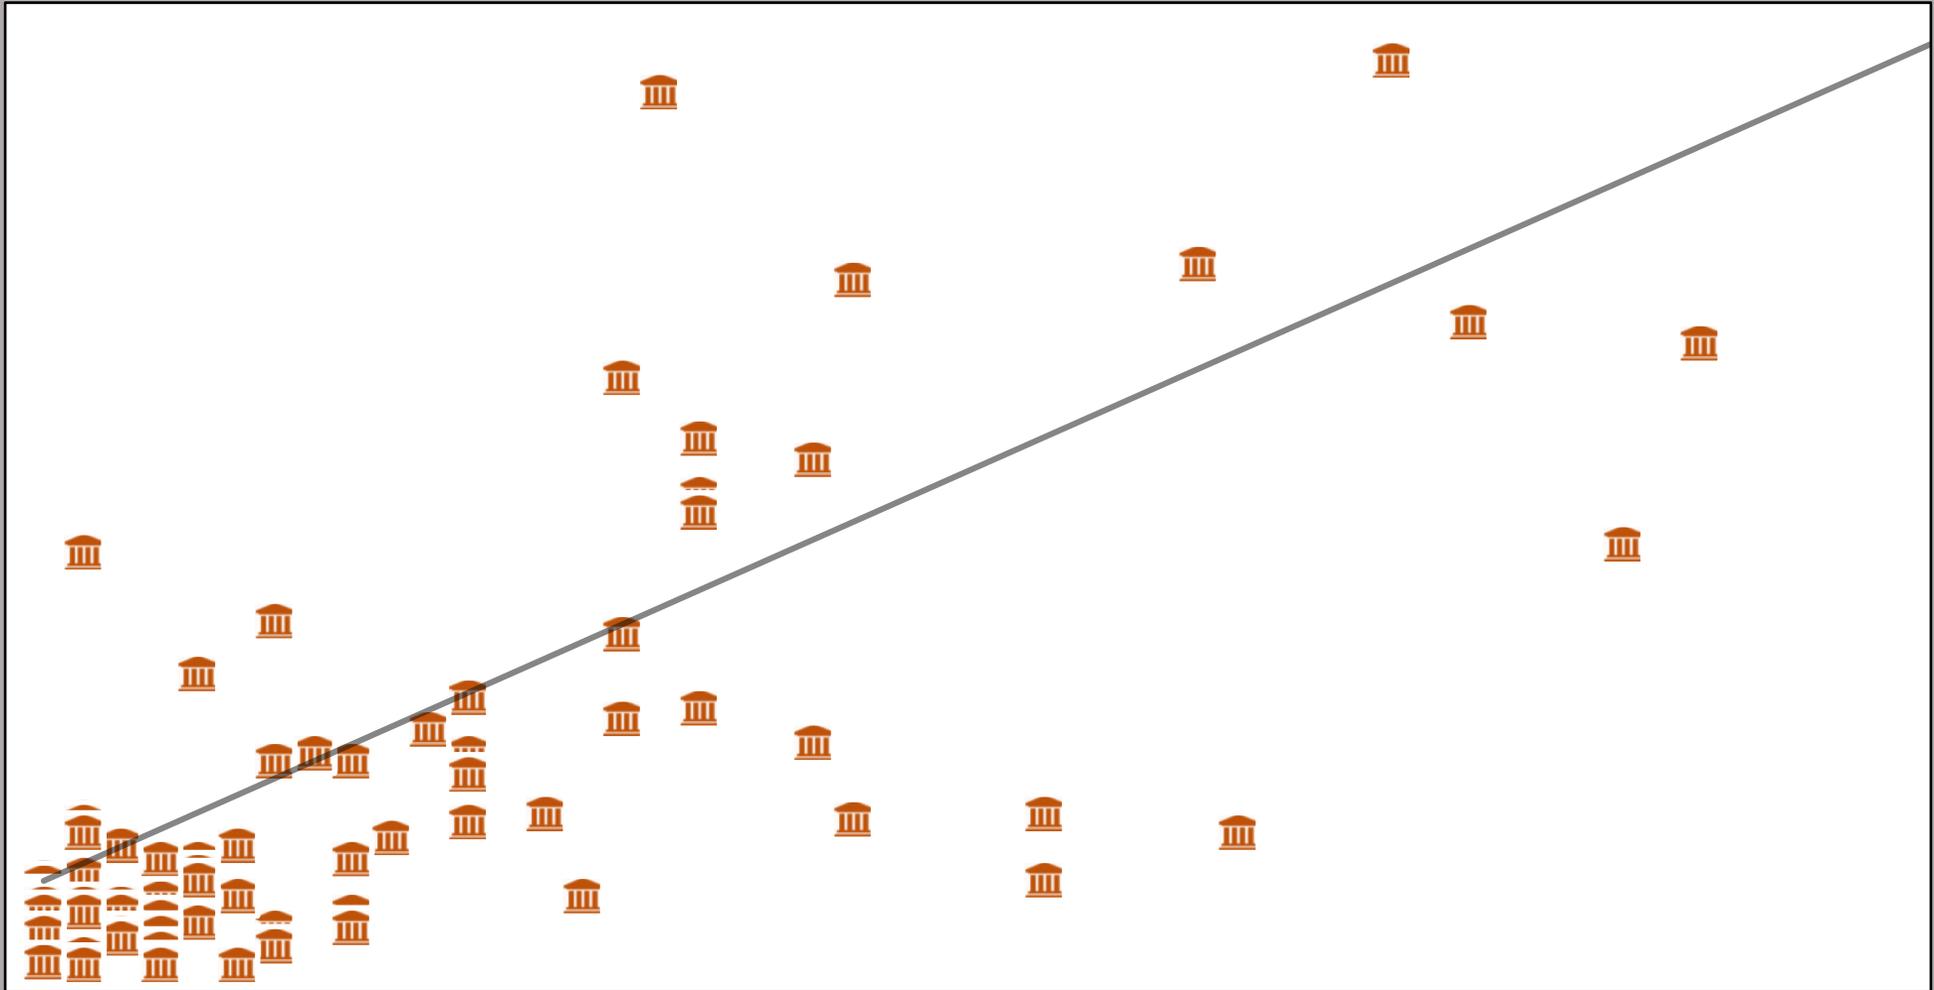

Impact

• Awards

After 5 years

FUNDING

Number of outcomes

Questions for quantitative conclusions

How can we group the data?

- Like for like
- Unique projects
- Context

How can we deal with many different dimensions?

- Data science techniques to move from standard reporting to more sophisticated analysis
- Use established frameworks from other sectors to determine important variables

How can we validate any of our conclusions?

- Partnerships
- Narrative

Can I accelerate impact?

Can I increase the scale of impact?

Can I focus on a specific sector or a geography?

Can I collect further/better information to help me see more patterns?

Working in partnerships to achieve all of this!

The Future

Continuous improvement of data **collection**.

A suite of visualisation tools to enable **description** and **discovery**.

Advanced data analysis techniques to support strategic decision-making and planning via **prediction** and **advice**.

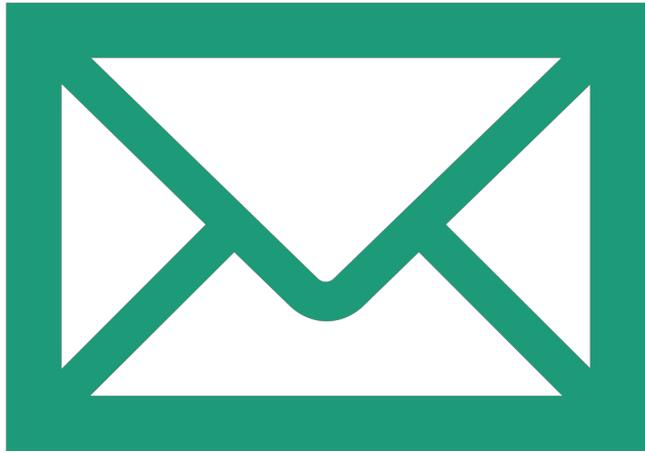

Discussion

What questions **data sharing** between funders and research organisations enable to be answered? What are the opportunities and barriers for data sharing.

What are your pertinent questions do we need to ask to **explore data**? Is the data available? What other data need to be collected/identified?

What **strategic/predictive questions** should we ask of the data? How can data analysis inform and support decision-making and planning by funders and research organisations?
